

NOMOS Process Supervision Unit Upgrade to PSU 6.1

Supervision and Data Storage

The Nomos PSU is an industrial supervision and data storage system. It includes a touch screen with a modern design and graphic symbols, entirely realized for ease of use. All production information and machine control operations are accessible from several user access levels. The Nomos PSU collects and permanently stores all production data as well as alarms. That information is accessible at anytime in various views, reports or file formats.

Upgrade benefits Performance

- Guaranteed support both in terms of equipment and specialized personnel
- Reduce risks of breakdowns and improved OEE
- Increase reliability and machine lifetime
- Modernize the equipment and the work environment
- Reduce maintenance costs
- An economical alternative to extend the line's lifetime
- Fits into proven equipment that already produces
- Access to new features in a digital environment
